

ChaosAI

The AI Copilot for Freelance Pentesters
& Cloud-First SMBs

FEBRUARY 2026

THE PROBLEM

90% of Businesses Are Priced Out of Security

A single pentest costs €15K+. Most SMBs just go without.

TYPICAL ORGANIZATION TIMELINE (1 YEAR)

Priced Out Entirely

At €15K+ per engagement, most SMBs and startups simply never get a pentest. They ship code and hope for the best.

Alert Fatigue

Automated scanners generate thousands of low-context findings, drowning engineers in noise.

Scaling Bottleneck

There aren't enough pentesters to go around. Freelancers spend 80% of their time on recon and report writing instead of actual hacking.

The Innovation Gap

SMBs need security they can actually afford. Pentesters need tools that handle the boring 80%.

LEGACY OPTION A

APPROACH
Manual Pentest

- ✓ **High Accuracy**
Human intuition finds complex logic bugs
- ✗ **Infrequent (1-2x/Yr)**
Leaves massive time gaps for attackers
- ✗ **Expensive & Unscalable**
€15k+ per test, linear headcount scaling

OUR SOLUTION
AI Copilot

- ∞ **Cyber Hygiene Automation**
Finds the low-hanging fruit continuously
- 🎯 **Pentest-Grade Accuracy**
Validates findings, filters out the noise
- 👤 **Affordable for SMBs**
€50/mo, not €15K per test

LEGACY OPTION B

APPROACH
Auto Scanners

- ✓ **High Frequency**
Runs daily or on every commit
- ✗ **High Noise (False Positives)**
Requires manual triage of thousands of alerts
- ✗ **Low Context**
Doesn't understand business logic

PROBLEM: SMBs can't afford pentests. Pentesters can't scale. **Everyone loses.**

Cyber Hygiene Automation for the Rest of Us

Find the low-hanging fruit. Generate the fix. Ship the PR.

Continuous Reconnaissance

Maps your attack surface automatically: domains, subdomains, APIs, cloud buckets. Runs in the background as you deploy.

Validated Findings, Not Noise

AI agents catch the common stuff: exposed keys, SQLi, IDOR, misconfigs. Each finding is validated before it reaches you, so no false positive triage.

Auto-Fix with PRs

Generates the exact code to patch each vulnerability and can open a GitHub Pull Request directly. Find it, fix it, ship it.

80%

RECON AUTOMATED

Auto-PR

FIX GENERATION

How It Works

From blind spots to prioritized insights in three autonomous steps.

● Raw Asset Data

● AI Verification Loop

● Verified Vulnerabilities

The Underserved Market

Freelance pentesters, solo consultants, and SMBs that can't afford traditional security.

TAM

€200B+

Global Cybersecurity

SAM

€3B+

Pentesting Market

SOM

€500M+

Freelancers, SMBs & Cloud-First Startups

MACRO TREND

Cybersecurity spend is resilient to downturns.

OUR WEDGE

Freelance pentesters and SMBs who need security but can't afford €15K+ engagements.

MARKET GROWTH

15.2% CAGR
2024-2030

KEY DRIVERS

SMB cloud adoption • Freelancer growth • Compliance pressure

Scalable SaaS Revenue

Tiered subscription model aligned with scan volume and enterprise needs.

Free

€0 / month

Individual developers & small teams

- ✓ 10 scans per month
- ✓ Basic reporting (PDF)
- ✓ Community support
- ✓ Single user

Target: Developers

Premium

€50 / user / mo

Growing teams & startups

- ✓ Unlimited scans
- ✓ AI remediation code
- ✓ GitHub PR generation
- ✓ API access

Target: Startups & SMBs

Custom

€50-€300 / month

Tailored to your needs

- ✓ Automated recon & report drafting
- ✓ White-label client reports
- ✓ GitHub PR fix generation
- ✓ Multi-client management
- ✓ Priority support

Target: Custom Needs

TRACTION

PRE-REVENUE

Validation & Early Traction

Real feedback from real engineers at companies that matter.

Pipeline & Origin Story

ACTIVE CONVERSATIONS

Companies where we have direct relationships and active conversations about the product.

Irish Water

Where the idea came from. Critical infrastructure team relying on infrequent, expensive pentests while their attack surface changed daily.

Former Employer

Core Idea Origin

Mediolanum

Irish financial services firm. Active conversations about continuous security testing needs.

In Conversation

Gorilla Capital

Finnish investment firm. Testing the platform for their own infrastructure security.

In Conversation

€500K Seed Round

Capital allocation to reach product-market fit and first revenue in 12 months.

Budget Allocation

TOTAL RAISE

€500K

12-Month Execution Roadmap

ON TRACK

MONTH 3

Production Ready

Production Ready

Harden platform for production. Ship self-serve onboarding. First 10 paying users from free tier conversions.

MONTH 6

25 Users

Paying Customers

25 paying users across SMB and freelancer tiers. Ship GitHub PR integration and white-label reports.

MONTH 12

50 Users PMF VALIDATED

Unit Economics Proven

50 paying users. Proven retention and conversion rates. Clear unit economics. Ready for Series A.

Technical Founder, Full-Stack Vision

Shubham Rao

Founder & CEO

EY · AWS · Irish Gov

AWS SA · MS SOC · Sec+

Cloud and AI engineer with experience building and securing large-scale infrastructure on AWS for enterprise clients. Previously held senior cloud engineering roles at EY and Irish Government, scaling systems for millions of users.

The idea for ChaosAI came from working at Irish Water, where critical infrastructure teams relied on infrequent, expensive pentests while their attack surface evolved daily.

CORE EXPERTISE

 Cloud Infra

 LLMs & AI Agents

 SecOps

 Python

Building the tool I needed when I was on the other side.

Why I Can Execute

The right background at the right time.

Founder-Market Fit

I've been the engineer scrambling after a pentest report drops. At Irish Water, I saw the gap between what security teams need and what they actually get. ChaosAI addresses that directly.

AI-Native, Not AI-Wrapped

Built the engine from recon to fix generation, and it's already being tested with real companies across three countries.

Proven Execution Velocity

From concept to working product to technical validation with engineers at TCS and Mediolanum. Shipping daily based on real feedback.

The Future of ChaosAI: The Virtual Security Engineer

For every company that can't afford a security team.

Offense

CURRENT

Automating the attacker's perspective for the most accurate risk data.

WE ARE RAISING

€500K

~₹5 Cr

Seed Round

Runway to build the team, ship production, and acquire first 50 paying

OUR VISION

"To become the virtual security engineer for every company that can't afford one, making continuous security testing accessible to SMBs and freelancers worldwide."

LET'S BUILD TOGETHER

✉ director@entropyresearch.ai

🌐 www.chaosai.dev

Building the future of autonomous security testing.

📖 The Plan (12 Months)

Product

Ship production platform & expand agent capabilities

Customers

Acquire first 50 paying SMB & freelancer users

Revenue

Prove unit economics and retention at €50/mo

Milestone

Validate PMF in the freelancer/SMB niche for Series A

★ Why Invest Now

Founder-Market Fit

Deep experience in Cloud, AI, and Security from EY, AWS, and Irish Government.

Active Pipeline

Active conversations with Mediolanum, Gorilla Capital, and Irish Water. Real demand from real companies.

Massive Underserved Market

90% of SMBs can't afford a pentest. Freelancers waste 80% of time on recon and reports. Both need this tool.

Massive Upside

Defensible niche with clear expansion path. Start with freelancers and SMBs, grow into the full security platform.
